Work Experience

DPCode inc | IOS / DevOps Developer | Remote | June 2022 – Oct 2022 Vancouver, Canada

- Configured automation testing and linting using CircleCI for code maintainability
- Designed a system architecture to meet a client's needs
- Created a serverless function to send an email with a customer's Invoice PDF

Myadcenter | Full-Stack Developer Intern | Remote | Jan 2022 – June 2022 Toronto, Canada

- Implemented the form component to purchase phone numbers with appropriate validations using Redux, MaterialUI, and Next.js
- Fixed existing code to retrieve billing data from database in Node.js and created components to display multiple information with pagination using Next.js
- Rewrote the method to search and filter data to maximize code reusability and maintainability. Fixed bugs for error handling in Node.js and Next.js

Hitachi Systems, Ltd | Systems Engineer | Apr 2020 – Sep 2021 Tokyo, Japan

- Implemented REST API for the user management system using Java
- Checked the test cases for construction cost management system manually and pointed out bugs of data inconsistency and validation for input field

OSS & Project

Outerbridge - <https://github.com/Outerbridgeio/Outerbridge/pull/107>

- Integrated google docs API using TypeScript for workflow automation tool

novu - <https://github.com/novuhq/novu/pull/1412>

- Added a component testing for settings using cypress, React.js, and Node.js for a notification management system

Expense Tracker - <https://github.com/yk-jp/expense-tracker>

- Implemented with React.js, Django, and Docker to keep track of a user's expenses. Learnt about containerization, caching and database design

Codenames - <https://github.com/yk-jp/Codenames>

- Full-stack app that allows users to play with friends by using WebSocket. It's implemented using React.js, Node.js, Socket.io and MySQL
